

USAGE GUIDE: **Polio**

In preventative and outbreak situations PurTabs & PurOne can be used cooperatively to clean and disinfect surfaces contaminated with Poliovirus to control outbreaks and contain further spread.

Poliovirus Transmission:

Poliovirus is transmitted through physical contact, including fecal matter, respiratory droplets or by touching contaminated objects used by infected persons. It is vital to contain the spread and clean and disinfect contaminated areas 2-3 times per day to contain the spread. Infected persons may spread Poliovirus to others immediately before and up to 2 weeks after symptoms appear.

Prior to Cleaning:

▲ **Hand Hygiene:** Use an alcohol-based hand rub or wash thoroughly with soap and water.

▲ **PPE:** Face mask, disposable gloves, clothing to fully cover skin and eye protection.

▲ **Laundry:** All soiled linen should be safely disposed of; other laundry should be soaked in disinfectant solution for at least 15 minutes.

▲ **Waste:** Contain any soiled waste such as bandages, paper towels, and general trash.

Disinfection Procedure:

AREA	PPM	USAGE	SCHEDULE
<ul style="list-style-type: none"> • High-touch Surfaces • Bathrooms • All fixtures, doorknobs • Windows & Mirrors 	2153 PPM	<p>Using a 2153 PurOne solution: Working in a counter clockwise direction: clean all high-touch surfaces with wipes or micro-fiber cloths that have been soaked with solution. Ensure surfaces remain wet with product for 10 minutes.</p> <p>Use a PurTabs 2153 solution in the electrostatic sprayer or trigger sprayer to spray all surfaces. Allow to air dry.</p>	2-3 times daily
<ul style="list-style-type: none"> • Floors 	2153 PPM	<p>Using a 2153 PurTabs solution: Mop floors starting from the back of the room and working toward the door. Mop out corners and room edges. Ensure floors remain wet with product for 10 minutes. Allow to air dry.</p>	2-3 times daily
